FORMULAE

Tri-Amino Formulae, an Amino Ion releasing hydrogen bonded molecule (patent pending application #20080064754 filed on March 13, 2008, (three new patent drafts being prepared for the molecule and process of production) affects the regulatory mechanism that governs the process of cell division in Damaged or Dysfunctional cell structures. It does so because the free Amino Ions in Hydrous solution inundate and bond to the nucleic acids within the unstable proteins of the dysfunctional cells. The resultant biosynthesis causes the unstable proteins to align, thereafter to become stable and return the cells to their normal function as programmed by the original DNA coding which is still implanted within their DNA structure. This mechanism also causes reactivation of the Proliferative phase regulated by the DNA thus significantly accelerating the healing process. The Tri-Amino molecule originates from basic amino-acids all natural, which ensure an FDA GRAS (generally recognized as safe) status. The molecule is not a pharmaceutical drug. It has multiple applications in the treatment of both human and animal health issues.

Carbohydrate derived, chemically pure, pharmaceutical grade, Fulvic Acid has a great number of all Natural: anti-fungal, Natural broad spectrum anti-microbial, Natural anti-bacterial and Natural anti-viral properties without the problems encountered from mineral derived Fulvic Acid. Fulvic Acid, has a proven ability to stimulate plant enzymes and amplify their production. Improves and optimize the uptake of nutrients and water by productivity of mineral fertilizers. This product will have a major impact as a Natural carrier of nutrients into cells Uses of Fulvic Acid for the Agricultural Industry.

Tri-Amino Fulvate, which is a binary salt obtained from the combination of the original Tri-Amino molecule with Carbohydrate derived Fulvic Acid (nine new proprietary patent drafts

being prepared). Tri-Amino Fulvate has shown the same non-toxic qualities as both Tri-Amino and Fulvic Acid, while enhancing and accelerating the healing properties of both compounds. The molecular structure of Tri-Amino Fulvate extends the treatment benefit of products to be offered, by adding all Natural: anti-fungal, anti-microbial, anti-bacterial and anti-viral properties of Fulvic Acid to the remarkable anti-inflammatory and tissue healing qualities of Tri-Amino which will address unmet medical treatment needs for both humans and animals. Tri-Amino Fulvate, is a proven carrier of vitamins and minerals into the cells of animals and humans by attaching to the protein. With the above, all natural formulations will ensure an FDA GRAS (generally recognized as safe) status. From Bio-degradable packing to all natural formulations...to ensuring that the products manufacturing and functions as promised.

Carbohydrate derived, chemically pure, pharmaceutical grade, [Fulvic Acid](#) has a great number of all Natural: anti-fungal, Natural broad spectrum anti-microbial, Natural anti-bacterial and Natural anti-viral properties without the problems encountered from mineral derived Fulvic Acid.

her you go:

I was somewhat skeptical of the many claims regarding the beneficial results following use of the Tri-amino fulvic acid spray. I have been a PhD chemist and a patent attorney for more than a decade and have seen more than my share of inventions that over claim and under provide.

My wife suffers from seasonal allergies although I never have. I obtained a sample bottle of the aforementioned nasal spray prior to a trip to a small east-Texas town. Many local Texans warned me that because of the abundant late winter storms, we should bring extra allergy medicine. I ignored their gentle warning! The discomfort was both new to me and never to be forgotten; thankfully my wife and I had the nasal spray to try. Although I truly did NOT expect it to work, I sniffed my first "hit" and almost dared the spray to work! Which it did. The relief was almost instantaneous. I was so amazed I took another "hit". Needless to say the nasal spray became our best friend for the season.

I went from non-believer and skeptic to grateful believer and advocate.

SUMMARY:

Provide executive oversight of companies intellectual property. Preparation and prosecution of chemical, pharmaceutical, biotechnology and bioinformatics related patent applications (combiChem; antisense; small molecules; diagnostics; therapeutics); develop strategies for global patent filings (composition of matter; formulation; method of use; article of manufacture; business methods); draft validity, freedom to operate, and noninfringement opinions; conduct due diligence reviews of patent portfolios; negotiate and prepare intellectual property agreements; assist and conduct interference procedures; and assist in litigation preparation.

Provide executive oversight of research direction.

Education

- June 1997 Saint Louis University School of Law
Juris Doctor
- National Jessup Moot Court Team

August 1994 University of Utah
Ph.D. Synthetic Organic Chemistry.

Doctoral research areas included developing new strategies for natural product synthesis including extensive use of molecular modeling and computer analysis. Developed the first catalytic enantioselective-lewis acid mediated allylstannane addition to aldehydes.

May 1988 Brigham Young University
Bachelor of Arts, Chemistry.

Undergraduate research areas included developing new strategies for novel crown ether synthesis. The specific aim was in the systematic manipulation of the ether molecule to increase specific cation binding.

Professional experience

Chief IP and Science Officer

- 4/05-present Aquaphotonics
- Executive oversight of research and intellectual property functions, manage outside counsel.

Of-Counsel

- 6/04-4/05 Procopio, Cory, Hargreaves & Savitch LLP San Diego, California
- Control over combiChem, small molecule diagnostics, business methods and bioinformatics

invention preparation and prosecution. Participated in interference involving combichem and bioinformatics related patents. Conducted numerous in-person Examiner interviews. Prepared license agreements. Prepared memoranda and motions on issues including petitions to revive. Assisted in determining government required documentation related to government-funded combichem and diagnostic research. Assisted in directing combichem research efforts based on the patent landscape. Prepare and prosecute to registration a new pesticide with the EPA.

▪ 5/03- 6/04 Cozen O'Connor ATTORNEYS San Diego, California

Partner

- Prepared and prosecuted combichem, biotechnology, pharmaceutical, chemical, nutraceutical, diagnostic and medical device applications and drafted various opinions, licenses, and distributorship agreements. Counseled client regarding infringement of diagnostic patents. Prepared memoranda and motions on inventorship and enablement issues. Initiated interference proceeding involving small molecule involvement in diagnostics invention. Responsible for due diligence, client counseling, and developing intellectual property strategy.

▪ 3/01-5/03 Isis Pharmaceuticals San Diego, California

Associate Director of Patents

- Autonomous control over combichem, small molecule diagnostics, business methods and bioinformatics invention preparation and prosecution. Participated in interference involving combichem and bioinformatics related patents. Conducted numerous in-person Examiner interviews. Prepared license agreements. Prepared memoranda and motions on issues including petitions to revive. Assisted in determining government required documentation related to government-funded combichem and diagnostic research. Assisted in directing combichem research efforts based on the patent landscape.

3/00-3/01 Tarbet Intellectual Property Law Seattle, Washington

Sole Practitioner

- Prepared and prosecuted chemical, food product, and mechanical patent applications. Prepared opinion letters, particularly on vitamins. Composed a publishing contract, licenses, and confidentiality agreements. Prepared state and federal trademark applications for several companies.

3/99-3/00 Seed Intellectual Property Law Group Seattle, Washington

Associate

- Responsible for the preparation and prosecution of US and foreign patent applications including combichem and related small molecule, environmental, medical device, bioinformatics, and laminates. Composed numerous agreements including licenses and confidentiality agreements.

10/98-3/99 Brinks, Hofer, Gilson & Lione Chicago, Illinois

Associate

- Responsible for the preparation and prosecution of all combichem applications from two major clients, Eli Lilly and Bayer.

6/1996-8/1998 THORPE, NORTH & WESTERN Sandy, UT

Summer Associate, June 20, 1996-August 15, 1996
 Student Associate, August 15, 1996-June 30, 1997
 Associate, August 16, 1997-August 31, 1998
 Patent drafting, patent prosecution, patentability opinions.

10/1993-8/1994 WASHINGTON UNIVERSITY DEPARTMENT OF OPHTHALMOLOGY
Saint Louis, MO

Research Faculty, October 1993 to August 1994
Chemical synthesis of research molecules directed to an analysis of potential causes of diabetic retinopathy.

KAIJ COMPUTER SOLUTIONS

Salt Lake City, UT

Founder, CEO and DBA, 1992 to 1997
Planning, development and programming of the interface and database for management of an orthodontic practice having multiple offices and using multiple operating systems. This project involved the design, creation and administration of both a SYBASE and ORACLE database containing patient and insurance information. The software provided access to the database from any office regardless of operating system or location.

NeXT COMPUTERS.....Salt Lake City, UT

MEMO

Date: February 27, 2010

TO: Steven Schutt, John Everding

FR: Gregory C. Erickson

Gentleman,

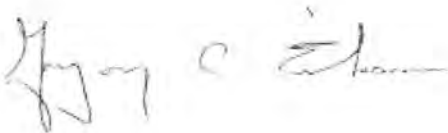

One of thing that gets a person excited about a new product is when they use it and it works. In December of 2009 and into January of 2010, I had a nasty red bump on my arm, near the right elbow that I began to worry about. I wasn't sure what it was...whether it could possibly be a fungal or bacterial problem, or worse of all, a skin cancer problem. I tried Neosporin on it first and then moved to a prescribed anti-bacterial cream called Bactroban Cream. Nether worked and the spot became more inflamed, itching and red.

Upon receiving the Tri-Amino fulvate shampoo, I began using it on the spot twice a day. A week later I received the Tri-Amino Fulvate CHD 400Fulvic Acid liquid from John Everding and began applying liquid on the wound after using the shampoo. The itching went away and within three weeks the skin problem was gone.

Below are the pictures we took from the day we started with the shampoo to show the healing process. I am honored to be on the Board of Directors of Amnion Animal Science, but I am more excited about how well Tri-Amino and Tri-Amino Fulvate works.

Below are the pictures of the process of healing.

Sincerely,

January 23rd, 2010

January 30, 2010 began using Tri-Amino Fulvate CHD 400Fulvic Acid liquid

February 6th, 2010

February 13th, 2010

February 13th, 2010 No bump, itching or redness.

ALEKSANDRA Y. MAKAROVA

DIRECTOR

Tri-Amion-Fulvate (CHD-FA)

Topical Lotion (Tri-Fulvate)

&

Secuvie AB (CHD-FA)

May 27, 2010

TO: John Everding and Steven Schutt

Hi John,

I used all of the Secuvie products you sent me for the last two months. It was enough time for me to discover all negatives and positives about these products. I didn't want to rely on the first impression, because I have sensitive skin, especially around eyes, so I wanted to know for sure if any signs of allergy would occur. Now I am ready to pronounce Secuvie as one of the best cosmetic lines I've ever used!!! Another of my favorite is Bellefontain (Switzerland), but it is not available in the States and almost as pricy as La Prairie (even though, I can't claim La Prairie as an outstanding product, I just don't think its quality can justify the price tag). Now I feel ready for my review of Secuvie the cosmetic line. It would be easier for me to give a description of every product I used separately, so here it is:

1. Repair Cleansing Gel:

It is my absolutely favorite! I have been through so many different cleansers since I start using them, but never really like anyone, just used them because I had to. Secuvie Cleansing Gel makes my skin unbelievably silky, easily removes makeup and a very strong smell leaves the skin incredibly refreshing.

2. Repair Booster Serum:

Great product!!! The very first time I tried Daily Repair Cream without a serum. It was just a pleasant moisturizer, nothing else. It works different with the serum. You actually can feel how it tightens the skin. The result of using the serum with Daily Repair and Day & Night creams for over 2 months is phenomenal! It does repair the epidermis, smoothes fine lines and prevents their formation. This is what we usually read on the labels of any "high end" face products. Does it really work that way? Secuvie works!

3. Daily Repair Cream:

Very good daily moisturizer... It has a pleasant, yet light texture and absorbs into skin quickly without residue, which makes it nice a base for the foundation. It also confers a velvetiness and comfort, while stay somewhat moist for at least 12 hours. It is an incomparable daily moisturizer for the summer time. I still have not found anything better than this product to use for hot summer days.

4. Repair Day & Night Cream:

I have to say I love it! I have pretty dry skin and it works just perfect for me. This is...the only one of the truly 24 hour moisturizer that I know of that works for that time period.

5. Repair Eye Cream:

I do have sensitive eyes and it's always being a problem for me to find the right eye cream. There are too many eye creams with an ingredient that make my eyes red, watery and burn, or have unpleasant texture that I can feel as long as I have cream on my skin. Even though this one has very strong smell, it does not irritate the eyes. Even at the end of the day when I touch my eyes, I can still feel the thin layer of moisture on my eyes. I only need a tiny amount of cream and it feels very moisture rich. As far as those disturbing lines under my eyes...well they are still there but less visible, very tiny ones are gone. Not bad at all! I've never had the same experience with any other eye creams before.

After all these are what I saw as positives and negatives:

Positives: all of the products do improve skin texture, absorb very fast, do not feel heavy on the skin at all, moisturize the skin for much longer than any other famous brands I know, smooth and reduce fine lines, make them less visible and prevent their formation. Outstanding products! Here is one more notable advantage of the product: it prevents the appearance of pigmentation caused by the sun and also removes the existing ones. I can work in my garden on a sunny day for a couple of hours without putting SPF cream (just Secuvie) and sun marks on my face do not appear. I have not heard of any other face cream with the same affect (besides products with SPF).

Negatives: very strong, disturbing and unbelievably unpleasant smell (the Cleansing Gel is an exception). After 2 months of using the products, I got use to the smell. Not as noticeable as it was at the beginning.... but just for me, even my dog doesn't like it, not mentioning my husband....

Sincerely,

Aleksandra Makarova

Hi to you all!

Thought you might be interested in these photos....

I had two rounds of skin tag removals earlier in the year. In all, I probably had 250 skin tags or small raised moles removed from my neck, shoulders, chest and sides. I also had a 3/4" in diameter, raised area on my hand removed. I didn't take pictures of what was removed, but felt that the effects of burning everything off were significant enough to photograph. I had applied the 7% Tri-Amino that John gave me to all the burned areas. Even more significant are the after photos showing no scarring.

Best to you all!

Nancy

Topical Lotion (wound care)

June 21, 2010

Dear Greg,

As a registered nurse and previous pharmaceutical sales representative married to a physician surgeon you might have known that Jeff and I were a bit skeptical about the many success stories you told us about Tafa 400. We were, however, very interested in "seeing for ourselves" what it could do.

I want you know the incredible speed and efficacy the Tafa 400 had for my 14 year old son. You know he is a competitive swimmer, and he'd developed a bad cough and cold which I wanted cleared up quickly as respiratory problems negatively impact swim times and he has a big meet this week. He was reluctant to "waste" the Tafa 400 on himself but after trying Zicam to no avail he agreed to take a few droppers of Tafa 400 in a drink. This is truly unbelievable, but literally within minutes his hacking cough was totally gone and it had been almost continuous previously! Neither of us could believe it but there were the results right in front of us! He still had a sniffle but that was yesterday and I expect it to be gone today—and that was after only one dose of two eye-droppers! Truly mind boggling!

He also used in on his big toe which he'd stubbed severely, it was black and blue and swollen at the nail bed, like it had been hit with a hammer. It was also bleeding as he kept re-injuring it. I dabbed a very small amount of Tafa 400 on a band aid and covered the wound with it last night. Today it is completely healed, no bruising or swelling, and it is no longer sore. My dog's hot spot is healing rapidly also.

Thank you for sharing this incredible product with us. I know Jeff is looking forward to seeing the results for his surgical patients. We will be anxious to watch this product progress and are extremely excited about its possibilities!

Thankfully,

Ann Waesche

February 15, 2010

TO: John Everding

FR: Charlie Stewart | Vice President

Dear John,

I want to thank-you for sending me the shampoo for my dog. He had a very bad spot (as you can see from the pictures below) that was causing itching and loss of hair. Before I receive the Shampoo in mid-January, I had to get a cone to put on the dog's head to keep him from chewing on the infected spot.

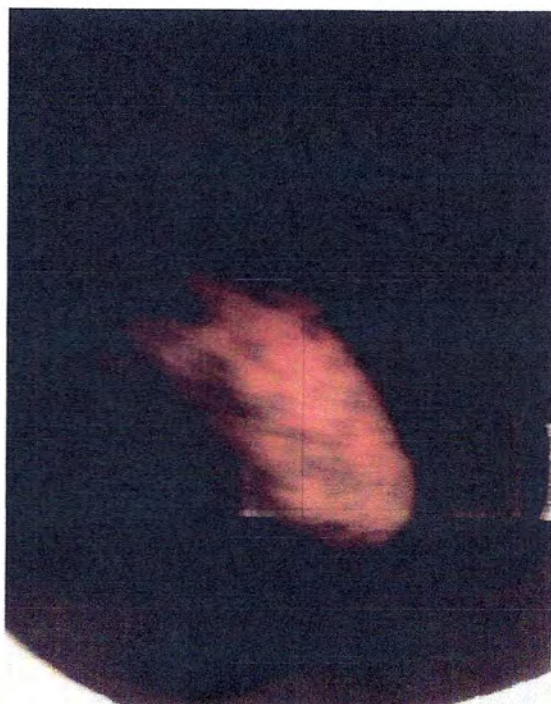

The day I got the shampoo, I washed the infected area and when finished rubbed some of the shampoo back on. Within 24 hours or less, I was able to take the cone from the dogs head, as the itching problems were gone. I continued using the shampoo you sent and within a month, all the hair had grown back the same color.

As we had discussed early in the process with my dog, you stated that the Amnion Animal Science shampoo alone would take care of the problem and you were right. This whole process sold me on the value of Tri-Amino and Fulvic Acid, along with the potential of the products in the market place.

Sincerely,

Charlie Stewart

(See picture below of one month progress for our dog whose name is Fred)

Tri-Amino –Fulvate (CHD-FA)

Topical Lotion

Wound Care

June 16, 2010

TO: Gregory C. Erickson

FR: Inna

Dear Greg,

On 15 May 2010 I was visiting my friends with my fiancé. As we left the friends' house I went to get into my car when my sunglass case fell out of my car and rolled under the car. I bent down to pick up my glasses case and the car door closed on my head which was between the door and door jamb. This impact left a deep 1-inch long open gash on the cheek bone area of my face. Besides being very painful, the wound was bleeding intensely.

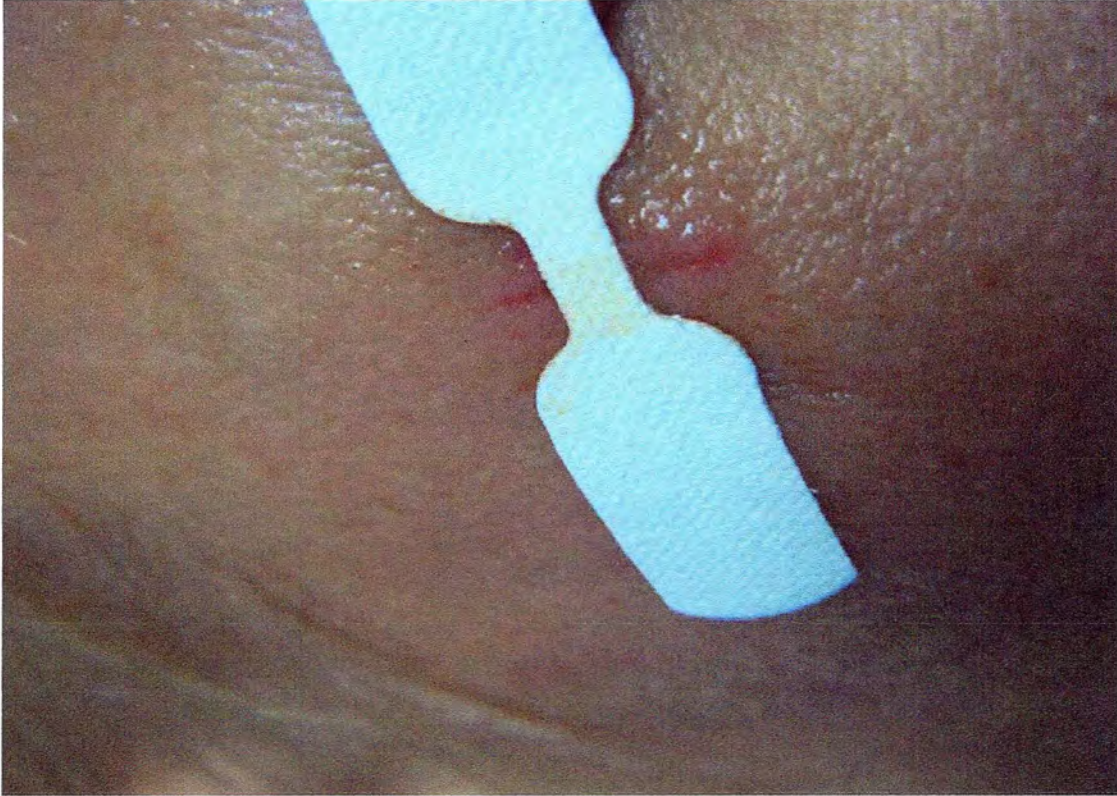

We went back inside and put a bandage and ice on the wound. The morning after, we started applying tri- amino fulvate solution you gave me to the cut, 3 times a day. The pain started going away as soon as I started using the product. I was surprised that there was no stinging sensation upon application of tri-amino fulvate to the open wound. As you see from the photos below TAFA 400, as Greg calls it, started healing the cut immediately, taking the redness away and closing the wound. Thanks to the TAFA 400, the wound didn't get infected during the entire time of healing. Four days later (20 May) the wound looked healed up leaving only a small clean scar. However, I continued using TAFA. By 4 June, the scar became almost unnoticeable. Everyone I know noticed a remarkable difference in how fast and how completely my cut has healed up, which makes me very happy because as any other girl, I didn't want to have scars on my face.

I am going to use tri-amino fulvate solution until the scar disappears completely.

Thank you immensely for letting me try the product

Inna B.

MEMO

March 17, 2010

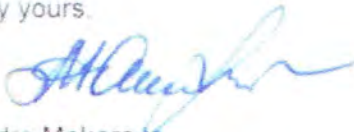

TO: Steven Schutt and John Everding
LUMINEC Corp

Dear Steven and John,

I want to thank you for giving us the opportunity to try TAFE shampoo. It worked great for me! I have to color my hair for the last 10 years to cover some grey area and for the last 5 years I've developed horrible scalp allergy (bright pink, itchy and flaky spots). The only way I could get rid of that problem was to use Fluocinonide 0.05%, a topical solution my doctor prescribed for me. I haven't been thrilled about the fact and was facing the consequence of possibly having to use it for the rest of my life.

It took me only three days to get rid of the allergy by using TAFE shampoo. It's absolutely fantastic!!! Besides that, it helped me to restore my heavily abused (colored ones a month for years) hair to the healthy and silky condition. I don't even need to use conditioner any more. What else can I say? This product speaks for itself – it works. I'm very impressed by your invention, and truly believe it has a very bright future.

Sincerely yours,

Aleksandra Makarova

To: Gary Sater <gnsater@gmail.com>

Subject: Re: 3 pictures for you

Picture 1 & 2

Burned when my hand slipped and grasped the metal handle attachment on a skillet. I immediately put my finger under cool running water for about 1 minute which made it feel better. Once out of the water, the pain increased to 10/10. There was constant throbbing, intense burning sensation, increasing redness and some swelling starting. I was able to get some relief with a damp cloth while waiting for the Tri Amino to arrive. Tri Amino Plus was applied approximately 45 minutes later. Almost immediately, the burning sensation and throbbing eased, with pain at 2/10. By the time I loosely wrapped my finger with a gauze 2x2, there was nothing but an occasional twinge of discomfort. Gauze removed 3 hours later. Tri Amino reapplied x1 that day, and twice again the next day.

Picture 3

Approximately 48 hours later. No redness or pain. Faint outline of burn area noted, but hard to see in picture. It did not blister, which I expected it to do. I did have decreased sensation of the burn area.

Two weeks after the burn, the skin sloughed off the burn sight. No scarring noted, sensation in that area has returned to normal.

Prescott, AZ 86301

Steven,

With sincere pleasure, I begin my letter to you with respect and appreciation for you taking my phone call after receiving your, Prototype Inhalant formulae for relief of upper respiratory with Tri-Amino & Fulvic Acid (TAFA), from Mr. John Everding. Your further instructions were very helpful!

In December 2009, I came down with a very bad cold, with non-stop coughing and upper respiratory breathing problems. I was not getting better and went to our family Physician. She told me it was just a cough and it would go away in a few days. It was getting very close to Christmas and I knew I was not going to be able to do everything expect of me not only for my family, also for my work. I am one of the office managers for a very large Orthopedic Clinic here in Northern California. I followed your instructions carefully, used the nasal spray three times per day in each nostril. Within 30 minutes, my coughing and cold symptoms, has started to clear up. After using the nasal spray for 24 hours my coughing was almost gone. Your product is amazing; I am still beyond words how well your product worked. I was able to celebrate the Holidays with my family feeling much better. This product worked well for me and I will continue to use your product if the symptoms come back, thank you!

If the above is not enough, during our conversation you described to me, one of your new formulated product: Tri-Amino-Fulvic Acid, (TAFA), with cumquats & kiwi, a shampoo for animals. I humbly requested you attention to our family dog, Bow, an 18 year old, Chocolate Lab, that is a family jewel. Bow, had major hot spots throughout his skin. You generously offer the shampoo, John delivered the product. After several bathings, Bow has no hot spots to this day. Bow's hair coat is awesome, shiny, very soft, much different than before. We cannot thank you enough for you efforts and thoughtfulness, your product is outstanding.

We wish you all the success in the future with your new products.

Sincere regards,

Patricia Boyce

Hi John and Steve:

I have received the products. Thank you.

I have also tried them. Here are my comments:

1- The Triamino Shampoo- It is surprisingly nice. Usually for natural shampoos, the feel and foam quality are poor but not this one. It also left my hair soft. Nice! If there's anything to do more with the shampoo, would be to increase flash foam and perhaps change the fragrance. I understand everything is natural etc but you can also get very nice fragrance infusions without calling it a fragrance. Since it is a pretty mild shampoo, I think it should have application in color-preserving of colored hair, which is 55% of the market.

2- The SecuVie products- I do not like the packaging. It does not feel natural. The cleanser actually leaked during shipment. The products also smell pretty bad which again can be helped with a fragrance infusion.

The cleanser effect is OK. It felt like left a film behind. It could have been a little more moisturizing. The booster is OK.

The eye cream, face cream, daily repair cream all have the same ingredient listing and feel all the same except the viscosity of the products. The formulation is kind of "soapy" as well. BUT overall, in terms of NATURAL products, these products receive a B+ from the aesthetics. Of course, I know how to get to the A level and still maintain natural, peg free etc :-).
