Dear Steve:

Just a brief update regarding my patient with terminal cervix cancer spread to bladder and bone. She is 46 years old and, after completing palliative radiation March 25, 2008, she was placed in the care of Hospice on 05/15/08. Over the past six months she has used the Tri-amino solution intermittently taking two tablespoons three times a day. She has had no significant side effects from taking Tri-amino. Unfortunately, given her late stage of disease, she has continued to have progressive decline in weight from 116 pounds to 95 pounds over past six months. Her life expectancy when she started Hospice was on the order of three months and surprisingly she has now lived just over six months and counting.

It is unclear to me how much the Tri-amino has contributed to her survival, although I believe there is a strong potential for therapeutic value of your free amino ion theory and the efficacy of the resultant Tri-amino formula and supplements.

I am a scientist at heart and therefore I would like to see a large group of patients treated with your Tri-amino product before making a judgment on its true efficacy. What I can say at this time, is that in the few patients I have treated with terminal cancers that they have lived significantly longer than I would have otherwise

thought and that I believe the Tri-amino formula probably played a key role in allowing them to live well beyond their expected survival times.

Letter, Steven R. Schutt

Date: 11/25/08

Continued ... Page 2

Steve, I believe that your free amino ion theory may very well represent a highly significant finding and I am of the opinion that both Tri-amino and the free amino ion theory could be very important steps forward in the never ending battle against cellular dysfunction.

My recommendation to you is that you try to get your theory and formulary circulated to the Gates and Clinton Foundations, as I believe association with these foundations would allow for further use of the Tri-amino supplements in third world countries where the economic losses caused by disease resulting from cellular dysfunction are enormous.

Steve, I wish to thank you again for allowing me and my stage IV cancer patients to have access to try your Tri-amino formula. As I have stated before, I believe the Tri-amino product has great potential in the future treatment of cancer, but I would like to see larger number of patients treated in a randomized clinical trial as this would give your theory and product the scientific credibility that I believe they justly deserve.

Respectfully submitted,

Thomas E. Beatrous, M.D.

Dear Steven,

Your Tri-Amino product has generated some uniquely interesting results, some of which I am reluctant to share for reasons of formula confidentiality. We are very pleased and have had some excellent client feedback. Of particular interest and surprise was the increase in energy level and mental alertness experienced by several individuals who utilized a custom-formulated deodorant containing Tri-Amino, indicating that it was able to cross the skin barrier and get absorbed into the body system.

Thank you for innovating such a remarkable ingredient!

Sincerely,

Tanya Workman
CEO

RE: Annie Allen
Chart No: 115851

Dear Steve:

As discussed with you, I saw Ms. Annie Allen in follow up today. She is now three months post treatment for locally advanced basi-squamous cell carcinoma right infraorbital skin with extension to nose and right inferior eyelid. She was treated with superficial electron beam therapy in combination with weekly 5-FU chemotherapy. In addition, Tri Amino lotion and capsules were given to maximize tumor response. All of this treatment has worked out quite well as the photo shows with complete resolution of disease and excellent cosmetic/functional outcome. Ms. Allen is quite happy with the result now three months post treatment and my exam today shows no evidence of recurrent or residual cancer. Recent PET scan follow up also confirms no evidence of malignant disease.

Steve, I am unable to tease out the contribution of each of the treatments (XRT, chemo, Tri Amino compound) but I cannot help but believe that the Tri Amino compound played an integral role in saving this patient's life. It should be noted that this is the first time in my medical experience that a carcinoma of this magnitude has been healed without the need of reconstructive surgery. I can only attribute this phenomena to the Tri Amino lotion and capsules. Since the other forms of treatment used were tissue destructive, only Tri Amino could have produced this result.

Best personal regards,

Thomas E. Beatrous, M.D.

Livermore, California 94551

Dear Mr. Everding:

In March of this year, I became aware of Stephen R. Schutt's "Free Amino Theory" and his invention of a Tri-Amino compound, which might prove useful in treating cancerous tumors and lesions. I requested a sample of the Tri-Amino compound for use on a patient suffering from a recurrent 12 cm x 12 cm squamous cell cancer of the vulva that, because of its location and previous chemoradiation, could not be re-treated by means of additional radiation therapy. I received a sample of the Tri-Amino lotion, and the patient (P.L.) began using it on or about May 18, 2005. She claimed immediate relief from the inflammation and used it twice a day.

I noted partial regression of the tumor to 9 cm x 9 cm in June and was convinced that the lotion was the cause of that partial regression, because the patient had no other form of treatment or therapy during the time of her use of the Tri-Amino lotion. Unfortunately, however, severe malnutrition and weight loss continued to plague this patient, resulting in continued generalized weakness and loss of appetite.

On or about September 1, 2005, the patient began taking the Tri-Amino material orally in capsule form. She received 300 mg per capsule three times a day.

On September 15th the patient was hospitalized for extreme malnutrition.

On September 18th, the patient P.L. expired after a progressive decline in weight and development of generalized edema due to protein malnutrition. She also had sepsis due to immunoincompetence. Vulva examination during this examination showed that her vulvar area appeared as if extensive surgical debridement had been performed with normal appearing skin and soft tissue surrounding a clean cavity at the site of the previous tumor. I believe the Tri-Amino lotion and capsules played a major role in causing the tumor necrosis in this endstage patient, and I believe further research using this compound is warranted.

I would gladly participate in any further research program that is developed for the Tri-Amino material.

Respectfully submitted,

Thomas E. Beatrous, M.D.

CASE STUDY

NAME: MARY DAVIS
CHART#: 111862
DATE: 10/16/06

HISTORY: This is a 64 year-old white female previously treated by me for Stage IV squamous cell carcinoma of the cervix involving bladder. The patient received chemo/radiation completed 01/05 and on most recent PET scan and MRI from 10/11/06 there is no evidence of recurrent or metastatic disease. Patient was recently treated by me for extensive psoriasis involving bilateral elbows. Photos were taken of these areas May 1, 2006 and the patient was instructed to use Triamino lotion to left elbow and left leg twice daily and to leave the area on the right elbow untreated for comparison. She returned every two weeks for photos. Serial photos have shown impressive resolution of her psoriasis. On July 26, 2006 patient was told to start treating her right elbow with Triamino lotion twice a daily and to continue using the lotion on the left elbow and left leg as she had been doing. It is my professional opinion that the Triamino lotion has significantly helped this patient with control of her psoriasis.

Steven, here are a couple of photos of the finger we were talking about. At the point where the nail starts at the end of the nail closest to the wrist there was a cavity which is now almost gone. The cavity is more obvious in the first photo than in the second. Hope these are what you wanted, Best wishes, Sid

Subject: The Finger

Hello There

I wanted to thank you for the ointment. It has reduced the swelling at kept the finger from becoming infected. I am friend of Sid Woodcock and he has asked me to email you these images.

I hope all is well and thanks again.

Sincerely,
Michael

Mr. John S Everding
5636 Bobby Drive
Livermore, CA 94551

Dear Mr. Everding:

To begin with, I have known Mr. Steven R. Schutt for at least the past twenty-five years. During that time he has become my confidante and friend.

In 1992, I was witness to his first experimental use of what he called his "Tri-Amino" compound, on a squamous cell cancer, which disappeared in less than two weeks and has never reoccurred. Our mutual friend Mr. Jack Coons had this cancerous lesion on the tip of his nose and Mr. Schutt provided him with a bottle of the Tri-Amino Lotion. On or about the twelfth day, the wart like tumor dropped off, leaving no scar tissue. Needless to say I was amazed and astounded for I had never seen anything like that happen in my forty plus years of medical practice.

In January 2003 I began having recurrence of angina pains. I had angioplasty for blocked arteries ten years prior this angina pain. This signaled to me that the blockage had returned. Soon after this, when applying some of Mr. Schutt's Tri-Amino lotion to a minor laceration on my hand, I noticed that after forty-five minutes, the angina pains had disappeared. I called Mr. Schutt and informed him of the experience.

We decided to experiment to find out if the Tri-Amino lotion was truly the cause of this phenomenon. I waited thirty-six hours and the chest pains returned. I then applied the lotion to the palms of my hands and the pains disappeared forty-five minutes later. Then I waited for another thirty-six hours and the pains returned. I then applied the lotion to an external hemorrhoid. I knew that if the Tri-Amino lotion were really responsible for the suppression of the angina pain, then the discomfort would disappear in less time because the hemorrhoid was a direct venous route to the heart. Twenty-seven minutes after the application of the lotion, the pains again disappeared.

I then began to use the Tri-Amino lotion daily on various parts of my body.

In June of 2003 I took a trip and was away for six days. When packing, I forgot to put the lotion into my suitcase and was without it throughout the trip. The pains never returned. I discontinued use of the lotion at that time and to this day have had no angina pains.

I suffered from extreme hypertension and even with blood pressure medications lost my kidney function. As a consequence I am now a regular dialysis patient. One very objectionable side effect of dialysis is that for several hours after the treatment all patients have terrible itching all over their bodies. Because the patients' kidneys are non-functioning, they are all restricted to the use of a 1% Lidocaine anesthetic, which hardly produces any itching relief at all.

Mr. Schutt kindly provided me with some Tri-Amino lotion that also contained Doxepin Hydrochloride. I tried it immediately after the dialysis treatment. The relief was total and complete. There were no signs of side effects of any kind and the relief lasted at least twenty-four hours with no diminution of sensation or other signs of anesthesia.

After approximately six weeks of Tri-Amino/Doxepin lotion use, the itching problem had permanently disappeared and has not returned during the last six months. In this period of time I have not needed to use any of the Tri-Amino/Doxepin lotion and am the only patient at the dialysis clinic that has no itching after treatment.

In closing, I am very interested in Mr. Schutt's concept of restoring function to dysfunctional organs by infusing Tri-Amino solution into the arterial side of the blood supply to the dysfunctional organ. If Dr. Ruiz's clinic has suitable dialysis machinery with competent technicians, I would be willing to become a test subject for this procedure.

Very truly yours,

Sherwin Raymond, MD. C.M.

Shingles:

To Whom It May Concern:

This letter is to state that for the last several months I have been testing and evaluating an experimental cream for the treatment of shingles provided to me by Kay Bernsten.

I have suffered with the effects of shingles for the last 21 1/2 years, sometimes with outbreaks of raw sores and sometimes with a severe burning and tingling sensation on my whole upper torso and lower back.

As I am sure you are aware, the symptoms of shingles come and go, depending on the stress level one is enduring. I have found after continued application of the cream it has lowered the pain to a very tolerable level. It has also softened the skin in the areas where the shingles were most prevalent and scar tissue has softened and is not nearly as sensitive as before.

Continued use of the cream has proved to be as stated in the earlier applications.

If one has never had a prolonged case of shingles, it may be very difficult to realize how discomfort of the skin can affect ones daily life along with the stress of daily living.

I would definitely encourage continued research in this area. Over all, I am very thankful for the opportunity to test this cream.

Respectfully,

Bill Batchelder

March 9, 2000

Thank you for allowing me the opportunity to test your new product for the purposes of enhancement of healing. I was not quite certain of the protocol so on one trial study a particular patient had second and third degree burns from the upper to the lower leg. I formed quadrants on the leg and each quad has a number 4x, 3x, and 0. This allowed for some form of standard to see how well the medicine would work in terms of frequency of application. 4x was applied 4 times daily, 3x was applied 3 times daily, 0 no medicine was applied. This particular patient sustained his burns from a kerosene fire and was taken to the hospital and treated as a conventional burn patient. Resolution was slow at best. I asked the patient for permission to use this new product which he agreed to on an experiment basis and applied the medicine as described above for approximately eight weeks. Polaroids were taken at intervals to see the progress and it appears to me that this product greatly enhanced the healing at least 30-40% quicker. Also I have some patients using this postoperatively, however I have not been able to determine a conclusion at this point because there was not enough medicine to complete the study. I am greatly impressed with the results. I believe you have a great product however more control studies need to be done with various types of patients. Congratulations on your product. Hope to get some more soon so I can further my studies.

Please find enclosed photographs for results of the burn patient.

Sincerely,

Dr. Bruno Casatelli

15 June 2000

Steven,

I owe you both many thanks. I met with Terry in December of 1999 and became aware of the product. I learned about its healing and regenerative qualities and read some amazing testimonials. I never expected to be one of those testimonials! I was snowboarding in Vail on January 4, 2000 when I took a hard fall. I was taken to the hospital to get checked out. In the emergency room, they discovered I damaged my spleen and was bleeding internally. I would need surgery to remove my spleen and appendix.

I woke up with a seven-inch scar down my stomach, closed up with 30 staples. I remembered the compound you had told me about. I contacted you to get some product sent to me, and you were kind enough to send it right out. I started applying it over my staples while I was still in the hospital. It tingled a little and made the area itch, but you had told me to expect that. When I saw my doctor at my two-week check up, he said, "it looks like you're a good healer, you aren't going to scar very badly". I have been amazed at how quickly the scar has healed.

Thank you so much for your fast response to my request for product, I think applying it early helped lots. I hope both of you have huge success with the product

Thanks again,

Tani S. Williams

P.S. The enclosed pictures are dated: Before - 01/08/00, After - 06/06/00.
