September 15, 2010

TO: Greg Erickson
LUMINEC Corporation
FR: Ann Waesche

Just heard back from Brenda; she says she will see the final follow-up tomorrow from the first group of surgeries several weeks ago. Unfortunately, their scanner is not working well in the office so she will have to mail me all the records and I will have to scan the photos and type up the progress notes before I can get them to you in usable format.

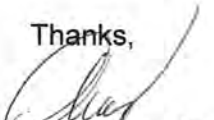

The good news is she thought everyone looked better at this stage than with any other previously used product, they were all given only a 3 oz. spray bottle of TAFE to use post-op on the surgical site, instead of any other products. She also reported one client whose new hair growth from the transplanted follicles looked more like the transplant had been done three months ago, rather than just a few weeks ago!

She also did not think the "shock-loss" was as bad as usual. (When the hair drops off due to "shock" to the follicle and then a new hair has to re-grow a new hair from the recovering follicle.) This is all very good news.

Just to clarify, shock loss only occurs occasionally and in these cases she did not notice much evidence of it. I will have more to report as soon as I receive the notes and pictures of the progress. Overall results were very favorable.

They have five confirmed surgical cases for next week but more are sometimes added at the last minute so I'd like to send them a few extra bottles.

Thanks,

Ann Waesche

Memo

September 5, 2010

Gentlemen,

We have two testimonials from newly devoted TAFE 400 patients that would like to keep their personal information and problem anonymous. Please understand that in providing this information, it is not our intent to become overzealous or inflate the value of the Tri-amino Fulvate Formulae, rather to target the potential use for clinical studies, since the molecule is quite new. It is important to know where to put the emphasis on clinical studies and identify the health problems with work on first. Time is important for our Companies, but curing certain health problems is of the essence for those who could use the TAFE formulas today and in the future.

Genital Herpes Virus:

I want to thank-you for the TAFE 400. I am a 50 year old male who had a sever breakout of Genital Herpes in late August. I followed your instructions of applying the TAFE 400 three times a day. One of the problems associated with it is itching and that stopped after about 2 hours of the first application and never returned. The bumps or infected area took about five days to clear up. I am a believer.

Thanks again,

Bob

Hemorrhoids

I have had problems with hemorrhoids and itching for too many years to count. I work out at the gym several times a week and often get them after an intense workout. I took your suggestion in February of this year and used the TAFE 400 you gave me. Since the first time I used it, the itching and swelling goes away immediately. I have not used any of the over the counter medication since then and any time I have a problem, I use the TAFE. When do you think you will have a hemorrhoid cream with the TAFE solution in it? Customer for life.

Randy D

Menstrual Cycle and Fibroids

In June, I had a very bad sore throat and swollen glands. I followed Steven Schutt's suggestion and started two tablespoons of TAFA 400 twice a day. Within three days lymph glands had subsided and the sore throat was pretty much gone. But the more significant factor was my period has begun and for the first time I didn't have the normal cramping and sever pain that accompanies it. I usually would have to take pain pills for the first few days just to get through it.

I also have Fibroids that have been growing and causing me chronic pain in the lower abdomen area. The last time I saw my gynecologist in early spring, they were at 10 and he discussed with me possible surgery in August.

With the first break-through I had with the Menstrual Cycle, Steven suggested I continue on the TAFA 400 (little more than one teaspoon a day) for the next month of July and again there was no sever pain or swelling for my time of the month. I also had almost no pains for the Fibroids. I went back for a scheduled appointment with my gynecologist and figured we do the cat scans and schedule surgery. To his astonishment and mine, the Fibroids shrank for 10 to 8. No surgery nor scan was needed and he wants back in October. I am continuing on the TAFA 400. I am following Steven's instructions to the tee by taking it every day for three weeks and then five days off and back on again. I also have yogurt three times a week.

Thanks,

A__

This is more important information that helps us gain a better understanding of what we can do with this molecule and the Future of Healing.

Prostate

Current Testimonials

Updat

10/28/2010

Steven. W. Stewart

September 13, 2010

Dear Steven:

Thank you very much for the bottle of TAFA 400. I used it this past month, August, for 30 days, taking it twice a day, morning and evening, after eating. I took 2 table spoonfuls each time. I found that there was a major positive difference in overall health. Specifically, I took it for my prostate condition.

As you know from our telephone conversation with my son, Charlie Stewart, I had the following symptoms in July prior to taking TAFA 400.

Difficulty in urinating-stop and start, not completely finishing

- 1. Getting up 8 times per night to urinate**
- 2. PSA levels of 8.5 and 12.3**
- 3. Enlarged prostate**
- 4. Possible prostate cancer-inconclusive at the time**
- 5. Blood pressure all over the place, but mostly in the 175-180 range**

Since taking TAFA, my urine flow has increased at least 25% in terms of a steady stream, and finishing more often. I am getting up to urinate currently 4-5 times per night. I will be having another PSA Test on Sept. 22nd, with an evaluation on Sept. 24th. My blood pressure has gone down from 180 over 110 to 150 over 85 at the last reading(August 18th). I am feeling better after eating, rather than nauseous and uncomfortable before taking TAFA 400.

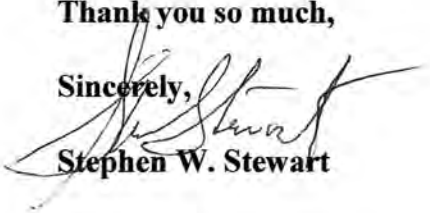

I do not know whether or not if I have Prostate cancer at this time. The doctor says that from the biopsy taken 3 months ago, even though the test was inconclusive, there is about a 40% chance that what was there will develop into prostate cancer. That is the prediction, even though right now it has been determined that I do not have prostate cancer. If the PSA level to be taken on Sept. 22 is 5.0 or below, he will not do another biopsy. If the PSA level is 5.1 or higher, then he will do another biopsy to see if there is prostate cancer. That is where it stands as of right now.

Steven, I am very pleased that I took TAFA 400. It is a great product and I would highly recommend it to anybody. My overall health has improved considerably and I am most

grateful for TAFA 400 and for your consideration in providing it to me. It is my hope that TAFA 400 will be very successful for you and your company. It certainly has been for me.

Thank you so much,

Sincerely,

Stephen W. Stewart

RE: Flu Complications

Dear Steven and John,

Last week, on Thursday the 16th early morning, my daughter had all the flu symptoms: like sinus, dizziness, headache and sore throat. As soon as she came back from school at 3:00 pm, she took a table spoon of TAFA 400 internally, and sprayed the Upper Respiratory Formulae in the nose and throat. Right after that she left for the TaeKwonDo School for the rest of the day, and came back at 8:30 pm, repeated the same procedure plus took half a glass of diluted Fulvic Acid Wellness Water and went to bed.

Before she went to school next day in the morning, she still had sinus congestion, but no sign of sore throat. That day was Friday, she had only half day in school, and as soon as she came back home by 1:00 pm, she got the same treatment of TAFA 400 and Upper Respiratory as she had done before. Afterwards, she went to bed and slept until Saturday. When she got up the following morning, she had no symptoms of flu, and was very energetic.

The fact that I didn't catch flu is nearly a miracle, in that I am the victim who gets flu 3-4 days later after anybody in the household has it. As you know, I've been taking TAFA 400 internally for a couple of months, and I guess my immune system got much stronger than ever before.

Kindest regards,

A handwritten signature in black ink, appearing to read 'Aleksandra'.

Hi Steven,

I thought I would update you as to my progress.

The nasal inhaler was very effective at knocking out my nasal and severe chest congestion.

I am using the TAFA 400 Solution on my skin issues.

I have enclosed a before and current picture of a pressure sore.

This sore has stayed the same for years until I started with the TAFA 400 and now see the healing occurring.

I have other skin areas which are seeing results.

I have had one of my sons use the TAFA 400 on a mole on his nose and it started shrinking.

I'm curious to see how this affects the mole.

My other son is trying it on his back.

I am ingesting 2 tablespoons a day of TAFA, 1 morning and 1 night.

I think I will need more in a week.

The nebulizer should be here in a week.

My general internal feeling is charged positive.

Something seems to be becoming alive.

I want to let you know I am very thankful for the opportunity to try this amazing molecule and thank you for your generosity to help others.

We both know the dark side and really appreciate the bright side.

Wishing you a great Labor Day weekend.

Arthur

Steven,

I wanted to tell you that before my daughter left for college, I poured her a small bottle of the TAFA 400. She wanted some as it had done a great job quickly healing a canker sore. Well, she called to tell me that she had ran out of her prescription acne product. For a 2 months supply of this prescriptive product it cost me over \$250. To make a long story short, she called me the other day to say she ran out about a week ago and had started to get some breakouts.

I recommended she use try the TAFA 400. That was two days ago. Here's a serious of text messages I received from her today:

Mary: Dad, that stuff works wonders for the face!!.....Do you have anymore?

Me: Yes, I will send it out to you when you need more.

Mary: Sweet.....what is it and why did it make my face so nice in one day?

Me: It's a product that Steven has been working on for some time.

Mary: Moneyyyyyy it worked wonders.

Thought you would enjoy this Steven. Have a good night.

Rick

Hi Greg, here's another win for Tafa:

I gave Joe Miller (he's on the list) one blast of the upper resp. (he works With me doing myofascial release therapy). As he has been suffering so much the last 3-4 weeks from allergies and sinus, headaches etc, and within one hour he felt great. The sinus's totally drained and one day later he was still 80% better. He would like several gallons of the stuff!

TAFA 400/DMSO

Current Testimonials

Update

10/28/2010

Thursday Aug 5th...received Experimental TAFA with DMSO from John Everding

Thursday Night...I did the amount of Elliptical, Squats, Lunges that I was CERTAIN would irritate My Pes Anserine Tendons L knee and cause pain.

FRIDAY AUG 6TH Spoke with you, Steven, around 5 pm. Informed you that the longest lasting relief I had ever had from a Topical when my Tendonitis is irritated is ONE HOUR post application. That was BluMjk or Voltaren cream. (Voltaren is a prescription only cream).

Other Topicals I have tried that were even less effective:
Salonpas pads/Aspercreme/DMSO 10% cream/ DMSO (pure)liquid/
Lidocaine/ketoprofen compound (available mostly to Pro Athletes)

1st Application of TAFA/DMSO: Around 6 pm Friday...pain gone immediately (I kid you not)

No pain until about Midnight...I sat too long...

2nd Application: Midnight.....no pain until Saturday at 4 pm when washing Ranger .

3rd application: Sat Aug 7th at 4:45 PM NO PAIN AS YET today (Sun at 10:30 AM)

- SUNDAY AUG 8TH: Had to climb a lot of hills with Ranger which set off the Tendonitis again.
I ignored it. Mistake

THURS AUG 12TH Had a lot of pain at work being on my leg all day (Level 4-5 out of 10)
Immed application of TAFA/DMSO at 5 pm reduced pain to a "3"
2nd application at 7 pm which eliminated the pain and swelling

FRI AUG 13TH Level 2-3 pain at work
Application at 4pm and no pain since then (today is Mon the 20th)

LESSONS LEARNED: Carry the TAFA/DMSO with me if climbing hills and apply during the climbs
