TO: Dr. Randall Davis

October 23, 2015

Dear Dr. Davis,

This letter is to give you an update as to the progress of a couple of patients that have been on your products TAFE 400 and Tri-Amino.

One patient has been diagnosed with Stage III rectal cancer due to HPV infection. She had been undergoing high dose Vitamin C and Curcuma IV's at another clinic. This therapy although assisting in controlling the spread of the cancer did not do anything for her extreme pain and swelling. The patient came to our facility and was immediately administered the TAFE 400 where by the end of the IV she had total pain relief which lasted for 6 hours. She has since this time been given TAFE 400 with Magnesium and Vitamin C IV's and is showing improvement in the progression of the tumor. Her WBC's have gone from 7000 to 11,000 since beginning these administrations. Her vital signs are stable and unremarkable. No fever and her energy is great. She is able to hike and mountain climb.

The second patient is a 72 year old pancreatic cancer patient. She has been suffering from blockage in the bile ducts and severe abdominal pain where she had to take Extended Release Hydromorphone and morphine for breakthrough pain. Since beginning the Tri-Amino and TAFE 400 her pain has decreased measurably, her energy has improved to where she is now cleaning the house and she is not taking any pain meds for breakthrough pain. The last CT scan has come back with positive results showing that the pancreatic tumor has decreased in size by 1/4. We can only attribute this to the fact that she has been receiving the Tri-Amino with TAFE 400 IV's.

We look forward to continuing with your fine product and look to have a happy final outcome with both patients. Thank you for a wonderful product and your assistance.

If you have any further questions regarding this matter, please feel free to contact me at the above numbers or (425) 417-8147, Thank you.

Sincerely,

Ronald G Waling, ND
